概要: The paper states that many of the difficulties in the Japanese society encountered during the recent years arises from the "rigidity" of Japanese-style organizations, of which a main cause is the dominance of direct and informal mode of communication in Japanese organizations, contrasted with written and formal mode of communication, which is common in U.S.. It also points out that the lag in IT investment in Japan can be explained from the same standpoint.

Act-No: Act-371, ,

備考: Keywords: rigidity of Japanese organization, life-long employment, vertically integrated organization, closed organization, short and simple acts, slow decisions, ICT in Japan
